nPak™ C+ Doctor Blade Life

Challenge: On a specialty paper line in the U.S., a competitor’s carbon and glass blade lasted only three days on the bone-hard composite center press due to high loading pressures. The machine ran at 2,800 fpm and used a DST holder in this position.

Solution: The nPak C+ doctor blade was installed, and the blade life increased to 10 days.

Results: The mill realized tremendous savings by switching to nPak C+ doctor blades due to the extended blade life and less machine downtime.

Highlights:
- Extended blade life
- Reduced downtime
- Improved wear rate
