**nPak™ G Doctor Blade Life**

**Challenge**

On a bone-hard composite press felt roll of a linerboard machine, a competitor’s glass epoxy blade only lasted four weeks. The U.S. mill was seeking a blade which would provide longer life. The machine ran at 2400 fpm and used a DST-R holder on this position.

**Solution**

The nPak G was installed and consistently lasts eight weeks, doubling the blade life of the previous blade.

**Results**

The mill has seen an overall cost savings with an increase of double the blade life.

---

**Highlights**

- Extended blade life
- Reduced downtime
- Improved wear rate
