### Overview

#### Applications

The **CeraEdge L creping blade** is recommended for tissue applications that require extended blade life as well as high productivity, asset utilization, and tons per day.

#### Features

- Stable, optimum performance throughout blade life
- Steady performance from blade to blade
- Plastic protected blade edges
- Packaged straight in wooden crates or coiled
- Longest blade life of any blade available in the market today

#### Benefits

- Reduced production downtime
- Fewer blade changes
- Improved sheet softness
- Less dust and linting
- Consistently high crepe count
- Blades can run for up to one week

---

The CeraEdge L creping blade provides a distinctive product for the tissue industry with a unique ceramic tip. It is thermally stable which reduces blade buckling, twisting, and warping. The thermal spray parameters are optimized to produce low stress coatings that are more robust (resistant to chipping) and result in longer blade life. Raw material powder selection plays an important part in the final coating properties and machinability. Kadant uses premium and proprietary supplies to produce unmatched coating quality.

Backed by over 80 years of Kadant creping blade experience, Kadant provides high-level field knowledge of creping blades with local experts who can evaluate creping blade performance with regular site visits. Kadant qualified service technicians can troubleshoot problems, check, set, align, and profile your Yankee Doctors to maintain them at optimum performance.
