PressTek Plus advantages

A major benefit of the PressTek Plus coated stainless steel blade is that the roll is improved which leads to fewer roll resurfacings. This has multiple benefits. First, the down-time associated with a roll change due to blade material depositing on the roll is eliminated. A typical center press roll change requires an extended outage that will tie up valuable maintenance resources. There is also the cost associated with grinding or super-finishing the roll surface and the loss of cover life due to premature grinding. With PressTek Plus blades, improved blade performance and extended roll life lead to increased productivity and reduced operating costs.

Kadant experience

Kadant has been a global market leader in doctoring systems and technologies for more than 80 years. During that time, our doctor assemblies and diverse family of carbon fiber, composite, and metal doctor blades have earned a reputation for high precision, efficiency, and reliability. Our field engineers are trained to identify machine doctoring problems and provide cost-effective solutions that provide the papermaker the opportunity to increase efficiency and productivity.
