The patented UniSlide blade holder is manufactured from corrosive resistant composite material. This makes the holder less susceptible to acids and chemicals commonly used in the paper industry. The holder is designed to accept all Kadant blade materials and sizes, allowing for the use of a standard UniSlide blade holder across multiple machine positions.

Designed for easy installation and removal, the UniSlide line of blade holders offers papermakers a time-saving solution. The lightweight composite materials provides for easier handling, and all UniSlide blade holders are designed to work effortlessly with Kadant’s patented T-Rail mounting bar. With the T-Rail system, wrenches, cranes, and scaffolding are not required for holder removal from the machine.
