At Kadant Johnson…

We see our technical seminars as something more than an opportunity to teach you about heat transfer technology. It’s also an opportunity for us to assist you with any problems you may have been experiencing with your paper drying systems or operation.

Registration fees are waived for employees of pulp and paper mills and approved suppliers to the pulp and paper industry. Kadant Johnson will be hosting this seminar and will be providing transportation from the seminar hotel to the Kadant Johnson facilities, refreshments at all of the breaks, as well as group meals during the course of the seminar.

Our seminars are unique in that they offer a very comprehensive range of subjects taught by Kadant Johnson experts. The seminar will separate into two groups – one technical based and the other maintenance based. Kadant Johnson seminars are beneficial to both new personnel and more experienced employees.

Seminar topics include…

- Drying Theory
- Troubleshooting in the Dryer Section
- Basic Principles of Steam and Condensate
- Steam and Condensing Rate Calculations
- Maintenance
- Rotary Joints
- Syphon Design and Application
